<b>Executive Summary .....</b>	<b>2</b>
<b>Most and Least Repeated Words .....</b>	<b>2</b>
<b>Pattern and Joint words Analysis .....</b>	<b>3</b>
<b>Conclusion &amp; Recommendations .....</b>	<b>3</b>
<b>Appendix.....</b>	<b>5</b>

## **Executive Summary**

This report shows key business insights through sentiment and word pattern analysis done on Airbnb data. Description maintains a positive but neutral tone, with little focus on safety, local experiences, or luxury. Apartments mostly related to emotion, houses highlight trust and comfort, and condominiums emphasize luxury. Word patterns show that apartments focus on city convenience, houses on family appeal, and condos on vacation experiences. To attract more customers, Airbnb should encourage hosts to highlight safety, emotions, and local culture.

## **Most and Least Repeated Words**

To identify the underrepresented words on description, the analysis looks at the frequency of each word. As expected, words such as "apartment," "bedroom," "kitchen," "walk," and "minutes" were the most common words that was reflecting an emphasis on property type, amenities, and location accessibility. However, several unexpected patterns emerge. /Please go to dashboard on figure 19 and filter out specific word on "word" filter to see the frequency. /

1. Safety and Security Mentions Are Minimal: Despite safety being a top concern for travelers, words like "safe" (374 mentions) and "security" (192 mentions) appear infrequently. This suggests an opportunity for Airbnb to encourage hosts to highlight safety measures, reassuring potential guests and improving booking confidence.

2. Luxury Words Are Not a Major Focus: Luxury-related terms such as "luxury" (216), "stunning" (149), "gorgeous" (143), "tropical" (161), and "resort" (210) are less frequent, which illustrates that Airbnb mainly serves mid-range and budget travelers. However, leveraging benefits and illustrating them through words that gives luxury feeling could derive feeling for the customers that they are making a great deal.

3. Local Experiences Are Underrepresented: When it comes to travelers, they often seek authentic, local experiences. Unfortunately, local experience terms are less frequent. Mentions of "local" (627), "historic" (244), "cuisine" (149), and "neighborhood" (249) suggest that while some hosts highlight cultural experiences, they are not a dominant theme.

## **Sentiment analysis**

Sentiment Analysis Tools AFINN, Bing, and NRC show how Airbnb hosts describe their properties emotionally. As shown in figure 1, AFINN indicates mostly positive descriptions using adjectives like "amazing" and "beautiful." Bing, which classifies words without intensity, scores lower than AFINN, indicating a more neutral tone. Low NRC score shows that the description contains too many details rather than strong expressive words. When it comes to property types of Apartments got the greatest emotion scores among the top three property categories /Figure 2/, commonly having phrases related to joy and expectation, making them appealing to short-term travelers. On figure 3, houses had a balanced sentiment, emphasizing trust, security, and comfort, making them ideal for families and long-term renters. Condominiums got lower sentiment scores, with descriptions related to modern conveniences rather than emotional words /Figure 4/.

## **Pattern and Joint words Analysis**

Figures 7 to 10 highlight key differences in unique words across property types using TF-IDF analysis. Apartments are closely associated with words such as "ramblas," "sheung," "doble," "gothic," and "pedestrian," suggesting a strong emphasis on walkability, historic areas, and cultural experiences, making them ideal for travelers seeking vibrant urban locations, efficient lodging, and access to public spaces. Unlike houses, apartments focus less on privacy, nature, or seclusion, reinforcing their appeal to city visitors rather than those looking for tranquil retreats. Houses

emphasize space, comfort, and privacy, with high-ranking words like "cottage," "fenced," "detached," "granny," and "leafy," suggesting an appeal to families and long-term renters looking for standalone homes with outdoor spaces. On the other hand, condominiums are marketed as luxury and resort-style accommodations, with words including "wailea," "kamaole," "ka'anapali," "napili," and "humpback," all related to popular beach destinations, indicating a focus on high-end leisure experiences. Unlike apartments, which emphasize city accessibility, or houses, which highlight space and privacy, condominiums prioritize premium resort and exclusive stays.

## **Conclusion & Recommendations**

Airbnb hosts primarily focus on property features rather than guest experiences, emotional appeal, or unique selling points. While descriptions are generally positive, they lack storytelling elements that could attract more guests. Additionally, Zipf's law analysis confirms that there is overuse of common description words that making them less engaging and too informative. Airbnb should actively support hosts by providing tailored guidance and collaboration opportunities to enhance listing descriptions.

### **Key Recommendations:**

- **Emphasize Safety & Security:** Highlight security features to build guest trust.
- **Enhance Expressive Language:** Use more engaging descriptions, especially for apartments and condominiums.
- **Showcase Local & Cultural Experiences:** Incorporate regional attractions and unique cultural elements to differentiate listings.
- **Diversify Word Usage:** Apply Zipf's Law and TF-IDF analysis to identify word patterns and help hosts balance common and compelling guest experience.
